Corporate Overview

About Us

Established in 2005, **Al-Ajjaj Limited Company W.L.L. (AALCO)** is a premier **Grade "A" Kahramaa-approved contractor** and an ISO 9001, 14001 & 45001 certified engineering powerhouse in the State of Qatar. Powered by an elite team of specialized engineers, AALCO delivers end-to-end, self-sufficient turnkey solutions across Extra High Voltage (EHV) power transmission, primary substations, structural civil infrastructure, municipal wastewater networks, applied HVAC/MEP systems, and in-house electrical manufacturing.

Over two decades of operational rigor, we have built an unshakeable reputation for engineering precision and safety excellence. We are proud to serve Qatar's most prestigious government, healthcare, aviation, energy, and national defense institutions—including Kahramaa, Ashghal, QatarEnergy, Qatari Diar, Hamad International Airport (HIA), Qatar Foundation, Lusail, Supreme Committee, Lekhwiya, Aspire Zone, Qatar Armed Forces, HMC, Qatar Fuel (Woqod), MOEHE, and Al Jazeera Media Network—actively advancing Qatar National Vision 2030.

2005

ESTABLISHED HERITAGE

Grade "A"

KAHRAMAA CERTIFIED

What We Do, Core Sectors & Capabilities

EHV & HV Transmission:

33kV, 66kV, 132kV up to 400kV underground cabling, Overhead Lines (OHL), route excavation, jointing, termination, and Kahramaa Hi-Pot testing.

Primary Substations & Transformers:

Complete construction of indoor & outdoor substations, power transformers up to 500 MVA, 11kV/415V package substations, and control rooms.

Civil Construction, Projects & BIM

Substation, commercial complexes, industrial warehouses, Woqod petrol stations, and 3D BIM-driven architectural project execution.

Sewage & Wastewater Networks:

Sewer networks, stormwater drainage, TSE transmission lines, pumping/lifting stations, and manhole chamber construction.

Road Asphalt Reinstatement:

Full-depth road reinstatement, asphalt paving, interlock pavers, and utility corridor restoration compliant with Ashghal standards.

Electro-Mechanical & HVAC:

Commercial HVAC plants (chillers, VRF/VRV, AHU/FAHU, ducting), industrial steam boilers, hot water calorifiers, and sanitary plumbing systems.

Infrastructure Water Networks

Major potable and TSE water transmission networks ranging from DN20 to DN2000 using Ductile Iron (D.I.), HDPE, and copper pipelines.

Smart Metering & AMI Automation

Nationwide supply, installation, and integration of smart electricity and water meters, Advanced Metering Infrastructure (AMI), RTUs, and telemetry.

Switchgear & Control Panels

Assembly of 11kV switchgear, RMUs, design-verified Form 4b LV switchboards up to 7,100A, feeder pillars, MCCs, and APFC capacitor banks.

Industrial GI Metal Fabrication:

Custom G.I. substation doors, acoustic louvers, sand trap louvers, water/power meter cabinets, and tubular poles.

Executive Leadership

Chairman & Managing Director's Message

"Since 2005, our purpose has been clear: to engineer resilient infrastructure that fuels the growth, ambition, and prosperity of the State of Qatar."

Since establishing Al-Ajjaj Limited Company (AALCO) in 2005, our journey has been driven by unwavering integrity, technical rigor, and national pride. Over the past two decades, we have proudly contributed to the foundational power transmission and civil infrastructure essential to our country's rapid expansion. As Qatar advances toward Qatar National Vision 2030, our commitment remains steadfast: to support our nation through sustainable engineering practices, institutional governance, and enduring client partnerships that leave a lasting legacy of reliability for future generations.

Engr. Rubaih Mohd A R Al Kubaisi

Chief Executive Officer's Message

"True operational excellence is built on total self-reliance-controlling the entire delivery chain from in-house manufacturing to turnkey on-site execution."

At AALCO, operational precision governs every project we execute. From Extra High Voltage (EHV) power transmission and primary substations to complex civil infrastructure and in-house switchgear manufacturing, our strength lies in our total turnkey self-sufficiency. By eliminating third-party dependencies, upholding a strict zero-harm safety culture, and deploying advanced engineering methodologies, our teams consistently deliver nation-scale projects on schedule and to the highest international standards—cementing AALCO's position as Qatar's most dependable EPC infrastructure partner.

Engr. Faisal Kunnath

EHV & HV Power Transmission

33kV • 66kV • 132kV • 220kV • 400kV Turnkey Grid Infrastructure

As an approved **Grade "A" Kahramaa Contractor**, AALCO delivers nation-scale power transmission networks across the State of Qatar on a complete turnkey EPC basis. Operating across all major voltage thresholds from **33kV and 66kV to 132kV, and 220kV**, our specialized power division executes complex underground transmission corridors and grid interconnections through congested urban routes and challenging desert terrain with uncompromising engineering rigor.

**POWERING
A STRONGER
QATAR**

SCOPE OF CAPABILITIES

Underground EHV & HV Transmission Cabling

Turnkey route excavation, trenching, high-capacity cable pulling, thermal backfilling, protective concrete slab installation, Distributed Temperature Sensing (DTS), and optical fiber pilot cable integration up to 220kV.

Specialized Jointing & Terminations

Multi-split VRV/VRF systems, packaged AC units, Fresh Air Handling Units (FAHU) with energy recovery, industrial exhaust fans, and precision factory-fabricated G.I. ducting.

Route Civil & Duct Banks

Deep route excavation, multi-way reinforced concrete duct banks, protective thermal backfill, road crossing sleeves, and pilot fiber duct installation.

High-Voltage Testing & Pre-Commissioning

Advanced on-site AC resonance testing (Hi-Pot), partial discharge (PD) diagnostics, sheath integrity verification, REF relay calibration, and underground cable fault location.

Substations & Power Distribution

11kV • 33kV • 66kV • 132kV Substation & MV/LV Network

ENERGIZING NATIONAL INFRA

AALCO delivers complete turnkey EPC solutions for Kahramaa-approved primary and distribution substations across Qatar. From heavy reinforced civil foundations and blast walls to equipment rigging, power transformer installations up to 500 MVA, GIS/AIS switchgear integration, and 33kV/11kV/0.415kV distribution networks, our engineering teams execute critical grid infrastructure with zero-defect commissioning and total national reliability.

SCOPE OF CAPABILITIES

Substation EPC Construction

Turnkey construction of indoor Gas Insulated Switchgear (GIS) and outdoor Air Insulated Switchgear (AIS) substations, transformer blast walls, cable cellars, and control buildings.

Power & Dist. Transformers

Rigging, placement, oil filtration, and commissioning of primary power transformers up to 500 MVA (132kV), and 11/0.433kV oil and dry-type distribution units (500kVA to 1600kVA).

Overhead Distribution Networks

Construction and maintenance of 33kV, 11kV & 0.415kV overhead lines, pole structures, conductor stringing, pole-mounted transformers, Auto Reclosers, and Air Break Switches (ABS).

Package Substations & RMU

Installation of 11kV/415V Package Substations (DPS), SF6 Ring Main Units, Drop-Out Fuses (DOF), Fault Passage Indicators (FPI), REF relay testing, and Kahramaa energization.

Buildings & Infrastructure Projects

Residential • Commercial • Industrial • Power Projects

AALCO's civil division delivers comprehensive structural concrete engineering and fast-track infrastructure across Qatar. Drawing upon extensive in-house plant machinery and expert teams, we construct heavy-duty substation shells, commercial complexes, logistics warehouses, and specialized fuel retail facilities. Our engineering rigor ensures structural longevity, precision formwork, and full compliance with municipal and Kahramaa standards.

BUILDING QATAR'S HORIZONS

SCOPE OF CAPABILITIES

Power Projects

Turnkey construction of heavy blast-resistant reinforced concrete walls, transformer foundation beds, basement cable cellars, and multi-story control buildings.

Residential, Commercial & Fit-Out

Construction of multi-story commercial complexes, residential townships, and institutional buildings driven by advanced 3D BIM modeling and high-end interior fit-outs.

Industrial Buildings

Turnkey delivery of large-span pre-engineered steel buildings (PEB), heavy logistics depots, industrial workshops, and high-load reinforced concrete floor slabs.

Specialized Fuel Stations

Complete civil execution of modern petrol retail stations (Woqod standards), canopy structural works, underground fuel tank civil chambers, and retail driveways.

Trenchless HDD & Road Infrastructure

Trenchless Crossings • Asphalt Reinstatement

SEAMLESS UTILITY CROSSINGS

AALCO's specialized trenchless drilling and road infrastructure division delivers advanced underground utility installations and surface restoration across Qatar. Utilizing our own fleet of heavy Horizontal Directional Drilling (HDD) rigs, we execute complex highway, railway, and channel crossings up to 48 inches without surface traffic disruption, complemented by full depth asphalt paving and Ashghal-compliant road reinstatement.

SCOPE OF CAPABILITIES

Trenchless HDD Drilling

Precision Horizontal Directional Drilling (HDD) pulling steel and HDPE pipes up to 48 inches in diameter beneath highways, waterways, and congested utility corridors with our own drill rigs.

Multi-Utility Duct Banks

Trenchless installation of sleeve crossings for Extra High Voltage power cables, potable water transmission lines, gas mains, and gravity sewer networks without environmental disturbance.

Asphalt Road Reinstatement

Full-depth roadway reinstatement, asphalt milling, sub-base compaction, wearing course paving, and road corridor restoration fully compliant with strict Ashghal standards.

Interlock & Hardscaping

Heavy-duty precast curbstone installation, concrete interlock pavers, pedestrian walkway hardscaping, thermoplastic road markings, and highway traffic signage integration.

Electro-Mechanical (MEP) & HVAC

Central Chillers • VRF Systems • Air Handling • Boilers & Plumbing

AALCO's electro-mechanical division delivers comprehensive commercial HVAC engineering, district cooling integration, and advanced building utilities across Qatar. From central water-cooled chiller plants and specialized ventilation systems to industrial steam boilers and high-capacity sanitary networks, our engineering teams provide complete turnkey design, precision duct fabrication, installation, testing, and commissioning tailored for extreme ambient conditions.

INTEGRATED CLIMATE ENGINEERING

SCOPE OF CAPABILITIES

Central Chillers & Cooling

Air-cooled and water-cooled chiller plants, district cooling energy transfer stations (ETS), plate heat exchangers, chilled water piping, and primary/secondary pumping systems.

VRF & Air Handling (AHU)

Multi-split VRV/VRF systems, packaged AC units, Fresh Air Handling Units (FAHU) with energy recovery, industrial exhaust fans, and precision factory-fabricated G.I. ducting.

Steam Boilers & Calorifiers

Turnkey installation of industrial steam boilers, commercial hot water calorifiers, direct and indirect heating vessels, thermal insulation, and automated pressure controls.

Plumbing, Drainage & ELV

Potable water supply, stormwater drainage, sewage lifting stations, sanitary fixtures, smart indoor/outdoor lighting controls, small power, and integrated building ELV services.

Electrical Switchgear & Panel Assembly

LV Switchboards • MCC • Feeder Pillars

CERTIFIED POWER ASSEMBLIES

AALCO's electrical manufacturing division operates a state-of-the-art assembly plant delivering fully type-tested low-voltage switchboards and control systems built to IEC 61439-1 & 2 standards. Utilizing design-verified Siemens SIVACON S8 technology rated up to 7,000A and Form 4b Type 7 separation, our certified facility combines in-house CNC sheet-metal fabrication with comprehensive 5,000A FAT testing to deliver robust, Kahramaa-compliant power assemblies.

SCOPE OF CAPABILITIES

LV Switchboards

Design verified Siemens SIVACON S8 and type-tested main switchboards rated up to 7,000A, 100kA-1s short-circuit withstand, Form 4b Type 7 separation, and fixed/withdrawable configurations.

Motor Control Centers (MCC)

Custom-built MCCs up to Form 4b supporting DOL, Star-Delta, soft starters, and VFD drives, complemented by automatic transfer switch (ATS/MTS) panels with single and double bypass.

Feeder Pillars & SMDBs

Kahramaa approved 4-Way and 6-Way Low Voltage Feeder Pillars (DIN & J-Type, 1600A to 2500A), street lighting pillars (IP54), and Sub-Main Distribution Boards (SMDB) up to 800A.

Capacitor Banks (APFC)

Automatic power factor correction capacitor banks up to 600 kVAR with 7% detuned reactors, microprocessor controllers, and in-house CNC punching, bending, and robotic gasket sealing.

Water & Wet Utilities Infrastructure

Pipelines • Potable & TSE Networks • Pumping Stations

AALCO's infrastructure division delivers comprehensive wet utility engineering and municipal pipeline networks across Qatar. Backed by two decades of proven execution, our specialized teams construct critical utility pipelines ranging from DN20 to DN2000 - encompassing **bulk potable water, TSE transmission, foul sewers, stormwater drainage, and district cooling chilled water networks** compliant with Kahramaa, Ashghal, and QatarEnergy standards.

STRATEGIC WATER NETWORKS

SCOPE OF CAPABILITIES

Potable & TSE Networks

Bulk potable and TSE water transmission networks from DN20 to DN2000, utilizing Ductile Iron (D.I.), HDPE, and reinforced valve chambers.

Foul Sewer & Stormwater

Turnkey construction of deep gravity foul sewer networks, municipal stormwater drainage, attenuation tanks, outfall structures, and specialized deep precast concrete manhole chambers.

Chilled Water Networks

Large-diameter pre-insulated carbon steel and HDPE chilled water transmission piping networks, connecting central district cooling plants to commercial, healthcare, and residential developments.

Pump Stations & Systems

Turnkey civil and electro-mechanical execution of potable water booster pump stations, sewage lifting stations, surge vessels, automated isolation valves, and pneumatic waste networks.

Industrial Fabrication & Smart Metering

GI Doors • Louvers • Cabinets • Smart Meters

CRAFTING QATAR'S GRIDS

AALCO's specialized manufacturing division operates an advanced sheet metal fabrication plant and automated meter deployment facility in Qatar. Equipped with high-precision CNC punching, CNC bending, and robotic gasket systems, we fabricate custom G.I. substation doors, acoustic louvers, and IP66 enclosures-complemented by nationwide field **installation of smart electricity and water metering (AMI)** solutions compliant with Kahramaa standards.

SCOPE OF CAPABILITIES

Substation Doors & Louvers

Custom-manufactured heavy-duty G.I. substation doors, acoustic doors, sand trap louvers for desert conditions, and architectural ventilation grilles.

Meter Cabinets & IP66

Precision-engineered water and electrical meter cabinets, outdoor service boxes, and IP55/IP66 weatherproof metal enclosures with automated robotic gasket sealing.

Tubular Steel Poles

High strength galvanized tubular steel poles, pre-drilled for safe transformer installations, distribution networks, and highway street lighting (Kahramaa approved).

Smart Metering (AMI)

Nationwide supply, installation, and field deployment of smart electricity and water meters, Advanced Metering Infrastructure (AMI), RTUs, and digital data collection
